

## I. LIST OF THE SCHMIDT PLATES

The Kiso 105 cm Schmidt telescope of the Tokyo Astronomical Observatory has been regularly operated since 1977, after a test observation period of about two years. A general description of the telescope is given by Takase et al. (1977, Reference 2). Plate data have consecutively been compiled into a magnetic tape (9-track 800 BPI) catalogue (Noguchi et al., 1978, Reference 22). Fundamental items of the first 2000 plates are given in Table 1 which are printed out of the catalogue.

Explanation of each column of the Table is as follows:

- (1) PLATE: Plate number with a heading letter which indicates the plate size.  
 $L = 35.6 \text{ cm} (14") \times 35.6 \text{ cm}$ ,  $S = 24 \text{ cm} \times 24 \text{ cm}$ ,  $D = 16 \text{ cm} \times 16 \text{ cm}$ ,  $T = 10.8 \text{ cm} \times 8.3 \text{ cm}$ .
- (2) (B) YMDHMS: Beginning of exposure in Japan standard time which is  $\text{UT} + 9^{\text{h}}$ .  
 $Y = \text{year}$ ,  $M = \text{month}$ ,  $D = \text{day}$ ,  $H = \text{hour}$ ,  $M = \text{minute}$ ,  $S = \text{second}$ .
- (3) AREA: Celestial area number (see Table 2).
- (4) RA(A) DEC(A): Right ascension  $\alpha$  and declination  $\delta$  of the actual telescope direction at the observation time. Coordinates of the plate center of a specified celestial area referred to the 1950.0 equinox is corrected for precession, refraction, and the prism offset angle to give the actual  $\alpha$  and  $\delta$  values.

For example  $12.34.5 = 12^{\text{h}}34^{\text{m}}5$  and  $+034.56 = +34^{\circ}56'$ .

When the telescope is pointed to the direction lower than the north pole, the value of  $180^{\circ} - \delta$  is given as DEC(A).

For the plates Nos. 1-738, the listed RA(A) and DEC(A) are the calculated values which include the correction for precession only.

- (5) PRISM: Prism data (the column being blank when no prism was used).  
 For example 2DA+ = 2 degree prism was used with its vertex direction toward positive  $\alpha$ , and 4DD- = 4 degree prism was used with its vertex direction toward negative  $\delta$ .
- (6) EMUL: Emulsion type (see Table 3).
- (7) EXP: Exposure time in minutes.
- (8) FILTER: Filter name (see Table 4).
- (9) IWDS: Estimated plate quality (the columns being blank when no estimation has been made).

Item	Rank	A			B			C		
		Q	U	E	R	I	N	O	P	S
I = Image shape	circular			elliptical			elongated			
W = Wedge density	proper			under			over			
D = Development	uniform			slightly patched			largely patched			
S = Surface quality	flawless			speckled			cracked			

- (10) C: Condition of the plate.  
 $N = \text{normal}$ ,  $B = \text{broken}$ ,  $M = \text{missing}$  (including the case where the plate number was skipped because of the miscontrol of the count).

As our policy the Schmidt plates are kept in a collective custody of the Kiso observatory and are prohibited to take out, although the priority to avail the plate belongs to the persons who are responsible for the observation program at least for a few years. Those who are interested in the listed plates may apply to study them at the observatory or to obtain film copies of them. Application form is sent upon request.

Table 2. Kiso Division System of the Celestial Area

Area Number* A	Area Center (Equinox 1950.0)		No. of Fields	Area Number* A	Area Center (Equinox 1950.0)		No. of Fields
	$\delta$	$\alpha$			$\delta$	$\alpha$	
0001	+90°	—	1	0599—0670	+20°	20m (A- 599)	72
0002—0011	+85°	2h24m (A- 2)	10	0671—0742	+15°	20m (A- 671)	72
0012—0027	+80°	1h30m (A- 12)	16	0743—0814	+10°	20m (A- 743)	72
0028—0051	+75°	1h00m (A- 28)	24	0815—0886	+ 5°	20m (A- 815)	72
0052—0081	+70°	48m (A- 52)	30	0887—0958	0°	20m (A- 887)	72
0082—0117	+65°	40m (A- 82)	36	0959—1030	- 5°	20m (A- 959)	72
0118—0157	+60°	36m (A-118)	40	1031—1102	-10°	20m (A-1031)	72
0158—0202	+55°	32m (A-158)	45	1103—1174	-15°	20m (A-1103)	72
0203—0262	+50°	24m (A-203)	60	1175—1246	-20°	20m (A-1175)	72
0263—0322	+45°	24m (A-263)	60	1247—1318	-25°	20m (A-1247)	72
0323—0382	+40°	24m (A-323)	60	1319—1390	-30°	20m (A-1319)	72
0383—0454	+35°	20m (A-383)	72	1391—1462	-35°	20m (A-1391)	72
0455—0526	+30°	20m (A-455)	72	1463—1522	-40°	24m (A-1463)	60
0527—0598	+25°	20m (A-527)	72	1523—1582	-45°	24m (A-1523)	60

\* Area number is added by 2000, 4000, 6000, and 8000, respectively, when the area center is shifted toward NW, NE, SE, and SW direction by  $\Delta\alpha=\Delta\delta=1^\circ$  (for plates of Nos. 1-1313), and by  $\Delta\alpha=\Delta\delta=5/3^\circ$  (for plates of Nos. 1314 and later).

Table 3. Emulsion Type

Symbol*	Emulsion	Symbol*	Emulsion	Symbol*	Emulsion
1 A O	Kodak 103a-O	2 A D	Kodak IIa-D	3 A F	Kodak IIIa-F
2 A O	IIa-O	1 A E	103a-E	1-N	I-N
3 A J	IIIa-J	1 A F	103a-F	4-N	IV-N
1 A D	103a-D	2 A F	IIa-F	1-Z	I-Z

\* Attached sign + or - indicates whether the plate is hypersensitized or not. Hypersensitization treatments are described by Aoki (1978, Reference 21).

Table 4. Filter Name

Symbol	Name	Type* ( $\lambda$ †)	Symbol	Name	Type* ( $\lambda$ †)
U1-1	Schott UG 1 (No. 1)	BP (3600A)	14 SP	Fuji S P 14	BP (4200A)
U1-2	UG 1 (No. 2)	BP (3600 )	50 BP	B PB 50	BP (5000 )
38-1	GG 385 (No. 1)	SC (3810 )	66 SC	SC 66	SC (6600 )
38-2	GG 385 (No. 2)	SC (3810 )	74 SC	SC 74	SC (7400 )
45-1	GG 455 (No. 1)	SC (4570 )	82 I R	I R 82	SC (8300 )
45-2	GG 455 (No. 2)	SC (4580 )	90 I R	I R 90	SC (1910 )
49-1	GG 495 (No. 1)	SC (4940 )			
49-2	GG 495 (No. 2)	SC (4960 )	38 P 1	Polaroid ( 0° )	+Schott GG 385
61-1	RG 610 (No. 1)	SC (5980 )	38 P 2	Polaroid (45° )	(No. 1)
61-2	RG 610 (No. 2)	SC (5990 )			
64-1	RG 645 (No. 1)	SC (6370 )	MUL 2	Multiple Exposure with two different filters	
64-2	RG 645 (No. 2)	SC (6420 )			
69-1	RG 695 (No. 1)	SC (6925 )	MUL 3	Multiple exposure with three different filters	
69-2	RG 695 (No. 2)	SC (6940 )			

\* BP=Band pass filter, SC=Sharp cut filter.

†  $\lambda$  is the wavelength of maximum transmission for BP filters, while that of half maximum transmission for SC filters; and it is the measured value for Schott filters, while the catalogued value for Fuji filters.

II. LIST OF OBSERVATION PROGRAMS (1975~1978)

Name	Institution <sup>†</sup>	Program title	Period	Reference
K. Hamajima, K. Ishida, B. Takase, T. Aoki, & T. Soyano	TAO	Telescope analysis—Polar axis setting	75 Sept.—76 Nov.	2,16
K. Ishida	TAO	Red giants in Monoceros region	75 Nov.—77 Apr.	8
K. Ishida & S. Isobe	TAO	Absorbing dust in HII regions	75 Nov.—	
K. Hamajima	TAO	Near IR surface photometry of M31	75 Dec. —76 Feb.	4
H. Maehara	TAO	Objective prism spectra	75 Dec. —77 Sept.	2
K. Ishida & K. Hamajima	TAO	Survey of Carbon and late M stars	76 Feb. —	10
T. Noguchi & K. Hamajima	TAO	Telescope analysis—Guide telescope setting	76 May —	2
T. Noguchi, T. Soyano, T. Aoki, & M. Shimizu	TAO	Telescope analysis—Hartmann test	76 Aug.—76 Nov.	2,13 15
H. Kosai & K. Hurukawa	TAO	Survey of faint asteroids	76 Oct. —	10
B. Takase	TAO	Survey of galaxies in the zone of avoidance	77 Jan. —	10
J. Jugaku	TAO	Detection of high-redshift QSO	77 Feb. —	10
H. Maehara & Y. Yamashita	TAO	Survey of high velocity stars	77 Apr. —	10,14
M. Hamabe*, S. Okamura, & B. Takase	*Tokyo Univ. & TAO	Surface photometry of edge-on galaxies	77 May —	
T. Noguchi, M. Kondo, & H. Maehara	TAO	Survey of UV-excess objects	77 Sept.—	10
H. Maehara	TAO	Survey of emission-line objects	77 Dec. —	10
K. Hamajima	TAO	Spheroidal component of galaxies	78 Jan. —	
M. Burkhead	Indiana Univ.	Surface photometry of M51, M104 etc.	78 Feb.	
B. Takase & T. Noguchi	TAO	Survey of UV-excess galaxies	78 Mar. —	10
M. Shimizu, S. Okamura, & T. Aoki	TAO	Telescope analysis—Pointing accuracy	78 Apr. —	23
K. Tanaka, Y. Sofue, M. Fujimoto, H. Maehara*, & T. Noguchi*	Nagoya Univ. & *TAO	Young stars associated with Magellanic stream	78 Oct. —	
K. Kodaira*, S. Okamura, B. Takase, & M. Iye*	*Tokyo Univ. & TAO	Quantitative analysis of galaxies	78 Nov. —

III. LIST OF MEASUREMENT PROGRAMS (1975~1978)<sup>†</sup>

Name	Institution	Program title	Period	Reference
<b>A. MICRPHOTOMETER</b>				
H. Maehara & Y. Yamashita	TAO	Spectrum of Mira Ceti	75 July —78 Jan.	3, 5, 6
S. Isobe	TAO	Interstellar absorption line of Orion stars	75 July —78 Jan.	
H. Maehara & Y. Yamashita	TAO	Binary model for CH Cyg	78 June —78 Aug.	
<b>B. IRISPHOTOMETER</b>				
K. Ogura & K. Ishida*	Miyagi Gakuin Univ. & *TAO	Galactic cluster NGC2244	77 May, Aug., Oct.	
M. Yoshizawa	Kyoto Univ.	Galactic cluster NGC2281	77 July	
M. Simoda	Tokyo Gakugei Univ.	Globular cluster M15	77 Aug., Oct., & 78 May, Aug., Nov.	
T. Ichikawa	Kyoto Univ.	Red giants in Cassiopeia region	78 Sept.	
S. Daido & Y. Yoshii	Tohoku Univ.	Z abundance of halo dwarfs	78 Dec.	
S. Isobe	TAO	IR magnitude of stars in Orion nebula	78 Dec.	

## C. ISOPHOTOMETER

10, 12

S. Isobe & H. Maehara	T A O	Optical polarization of Comet West	76 Mar.	9, 11
S. Isobe	T A O	H $\beta$ isophote of the Barnard loop	76 Mar.	7
N. Sekiguchi	T A O	Photometry of the lunar surface	77 May, July, Nov.	
K. Nakajima	T A O	Automatic stellar image detection	77 Sept.	
T. Liu	Purple Mountain obs.	Comet Kohoutek	78 Apr., Aug.	

† Those which associate with the observation program are not listed.
